Washington Irving High School (NYC)*

Dr. Katherine Staltare

*Chairperson, Mathematics Department
Yonkers Public Schools*

Dr. Robert Gyles

*Department of Curriculum and Teaching
Hunter College, CUNY
Former Teacher of Mathematics*

Dr. Alan Tucker

*Professor of Applied Mathematics
SUNY Stony Brook*

October 8, 2003

Acknowledgments

The Panel would like to begin by expressing its appreciation to the Board of Regents and the Commissioner of Education for the establishment of this Panel. In the group are some who have raised questions in the past about the mathematics graduation requirements, and we are impressed that we have been invited to study the issue and present a formal report. The Panel is especially indebted to Associate Commissioner Tom Sheldon for his help with all aspects of our work; indeed, at the end of its first meeting, the Panel engaged in a spontaneous round of applause for Mr. Sheldon's efforts. The Panel would also like to express appreciation to the members of the State Education Department staff who were involved in responding to our extensive requests for data and information. In particular, we would like to thank Jim Kadamus, Jerry DeMauro, Jackie Marcano, Anne Schiano, Gretchen Maresco, Terry Calabrese-Gray and Deb Hogan for all of their help.

The Panel would like to express special appreciation to Mary Ann Jansen, Secretary to Associate Commissioner Sheldon, for her efficiency and her patience as we worked through several drafts, and to Ruth Billings, Secretary to the Superintendent for the Northport-East Northport School District who, as secretary to the Panel's Chairperson, found herself with some new responsibilities, and who handled all with her usual aplomb.

The Panel members are deeply appreciative to our school districts, universities, and employers for their willingness to permit us to engage in this important work.

Finally, the Panel members express appreciation to our families for their patience, as we devoted much personal time to this effort rather than engaging in other family activities. You truly are the foundation for all of our work.

Table of Contents

I.	Introduction	1
II.	Executive Summary	3
III.	The History of Math A.....	10
IV.	The Development of the Math A Exams.....	12
V.	Findings and Recommendations.....	15
	A. The Math A Standards.....	15
	B. The Math A Exam.....	22
	C. Infrastructure Issues Related to the Attainment of Math A Standards	37
	D. Additional Issues	40
	1. Scoring Rubrics, and Communications to the Field Regarding Grading	40
	2. Calculator Use on the Math A Exam.....	41
	E. The January 2004 Exam, and All Math A Exams Until a New One Is Designed.....	43
	F. Suggested Timeline.....	45
VI.	Summary and Conclusion	46
